

FOR IMMEDIATE RELEASE

tenKsolar Experiences a Summer of Expanding Sales in a Turbulent Solar PV Market

Minneapolis, MN - September 1, 2011 - tenKsolar, Inc., the manufacturer of the innovative RAIS® photovoltaic ("PV") module and RAIS® Wave system for commercial rooftops, has expanded sales to both U.S. coasts and Europe during the summer of 2011 — despite rapidly declining prices for conventional PV solar.

"The reasons are simple," said Joel Cannon, CEO of tenKsolar. "On an installed basis, the tenKsolar solution provides less expensive energy than any other solar PV technology with significant feature advantages. tenKsolar typically enables 50-100% more kilowatt hours off of a commercial rooftop versus conventional PV at a lower cost of energy."

Peter Greenberg, co-owner of Energy Wise located in Eugene Oregon and a tenKsolar customer said: "There is very little that is innovative in the solar PV world. tenKsolar has turned that on its head, designing a better system from the top down. We are very impressed with the integrity of both their products and team. Now that we have installed our first 100kW, we are looking forward to installing another 800kW over the next six months."

Dallas Meyer, tenKsolar's Founder and President, commented on recent failures of high profile U.S. solar companies, "These failures make it clear that winning entrant technologies will be those that can turn a profit in an environment of low prices, and which are highly capital efficient. This combination is what tenKsolar's business model is all about."

About tenKsolar –

tenKsolar designs, manufactures and markets the world's most productive and reliable photovoltaic solution. The RAIS® Wave solution offers a complete, turnkey commercial rooftop and space-constrained ground mount system providing the solar industry's lowest energy and installation costs as well as low-voltage safety. Founded in 2008, tenKsolar is headquartered in Minneapolis, Minnesota. More information about tenKsolar can be found at <http://www.tenksolar.com/>
